10 December 2013

**To whom it may concern,**

I would like to place on record that 1Energy and Freepower have provided a valuable service to the Mediclinic Group by delivering bespoke designs and installing a number of Solar Hot Water Systems for the Mediclinic Group of Hospital throughout South Africa as well as in Namibia.

- Highlights include the first installation of a 40kW Photovoltaic solar roof top installation at our Hospital in Oudtshoorn complete with remote monitoring. The system is intended as a pilot for the group and has supplied the Hospital with reliable solar power for over a year.
- Mediclinic was the recipient of the prestigious Eskom Energy Efficiency award (ETA Award) for industrial energy saving, Freepower played a major role in designing the system and was responsible for the final installation of the project.
- Freepower has on a few occasions and at my request presented on the topic of "Energy & Heat reduction in Hospitals" to the South African Federation of Hospital Engineers (SAFHE) at various hospitals around the country.

I commend the manner in which these two companies work together seamlessly complementing each other's skills, we have been impressed by their professional know-how, their high level of service and willingness to go the extra mile.

I have absolutely no hesitation in recommending their services to any company seeking a reliable, cost effective solution for their first or next renewable power or hot water installation.

Yours sincerely,

**Kevin Poggenpoel**  
**GENERAL MANAGER TECHNICAL OPERATIONS**
