**To whom it may concern.**

**Ref: 1Energy / Renewable energy solutions and energy cost saving**

I would like to express my great satisfaction with the company and owners of 1Energy with regards to the hybrid power, electrical reticulation and renewable water system installed by 1Energy at our new luxury lodge built by Tourvest at Lemala Kuria Hills Tanzania.

Kuria Hills was a greenfield development and was completed in two phases. The first was completed in November 2012 and was ready for occupation early 2013. The second phase, which added another five luxury tented units, was completed in July 2014.

The site is located in a very remote area and logistics had to be carefully planned, a requirement that the 1Energy/Freepower team carried out flawlessly. Their installation also included the installation of borehole pumps and a water purification system to treat the water supply to the lodge.

The complete project was handed over and commissioned in record time, and our management team has received many compliments from visitors to the lodge.

We look forward to working with 1Energy in the future and have no hesitation recommending their professional services and know-how. Their ability to work in remote areas under sometimes difficult conditions, and their exceptional back-up services, are to be commended.
